

# Saving mini DVD Camera Media to Computer

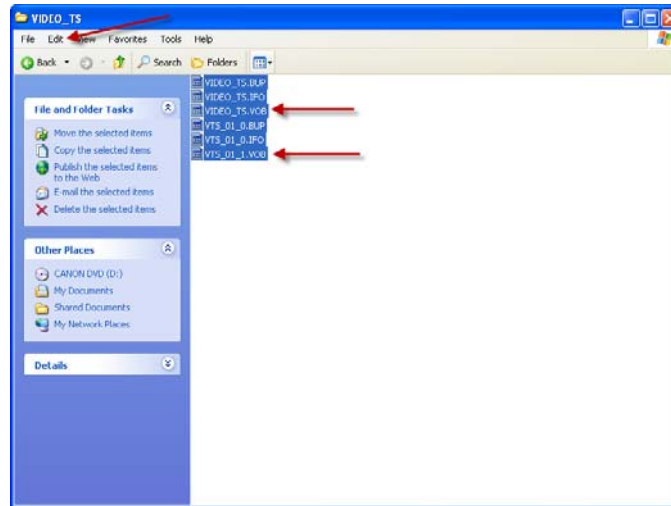

1. The first step is to make sure your disk has been finalized. This must be done in the camera. Once you know your disk is finalized you can remove from the camera and insert into your computers dvd tray. Make sure it is setting in the middle of the tray inside the smaller circle.
2. The disk will show up on your desktop. If not look for the disk under the Start menu and click on My Computer. Right Click on the DVD and select open from the menu to view your media.

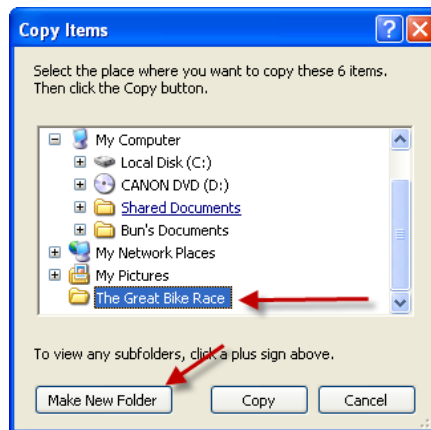

3. Right click on the video folder and select open from the menu.

4. Left click on each clip in order to select while holding down the Shift key on your keyboard. This allows you to select multiple clips at once. Also note that in Any Video Converter you will only need the VOB files as the others will not be recognized. You may still copy all of the files to your desktop if you wish. Once your clips are selected they will be highlighted in blue. Left click on Edit from the main toolbar and scroll down to select “Copy to Folder”.

5. Click on “Make New Folder” and label the folder with your projects name for easy location. Once you have named your folder click on the Copy icon.

6. You may now eject the mini DVD disk. The folder you created with your media clips will appear on your desktop.
